

bluetooth hands-free units

Seecode – the innovation company

SeecodeWheel

The Safe One

The fourth element at free speaking, SeecodeWheel, the hands free car kit in the steering wheel. Extraordinary and extravagant. Perfect design, optimum position, fastest handling and and crystal clear sound, the SeecodeWheel shows new dimensions. Installation in a few seconds, high power battery for long conversation time, multiline display and the ergonomic perfectly placed operating elements characterize the SeecodeWheel. Use your hands-free car kit without taking the hands from the steering wheel, because:
Safe is safe

VOSSOR PhoneBook

The Invisible One

The Vossor Phone Book is the perfect Bluetooth handsfree car solution, blending seamlessly in to your car. It's quick and easy to install, taking only a few seconds to clip over the existing mirror and connect. The display, microphone, speaker and operating buttons are all fully integrated and ideally located at face level and in the line of sight. More importantly, from a safety perspective, looking in the mirror is something you do as part of everyday driving.

The Vossor Phone Book has a great specification with the ability to link to your mobile phone book, showing the name of your contact in the display.

This allows you to scroll through your phone book and make calls from the mirror without touching your phone.

SeecodeVision

The Flexible One

The gooseneck and air vent holder provide ergonomic and flexible mounting in nearly any position. They provide a clear view, in close range of the driver, which can be easily adjusted for the comfort of the individual. The large keyboard allows quick and easy handling of calls, useful for those whose fingers are not so nimble. The crystal clear display is linked to your mobile phone book and shows the name or number of the person calling.

SeecodeTube

The Clever One

Whether the sun is shining or clouds are in the sky, the position of the sun visor doesn't matter, the SeecodeTube is always in the right position. Its clever design allows you to switch its position without re-moving it from the sun visor whilst maintaining a clear view and perfect alignment of the display, microphone and loudspeaker. Despite its small size, the SeecodeTube has a great specification, including phone book recognition.

Seecode are one of the most innovative and forward thinking Bluetooth manufacturers.

The quality of design, electronic development and engineering 'made in Germany' is well known and installed within the philosophy of the company. Seecode specialises in Bluetooth handsfree car kits and its success speaks for itself. The combination of a dynamic team, creative design and professional production guarantees a quality product for successful distribution and retail.

Seecode is a great brand in its own right, but we will consider OEM and ODM requirements.

Seecode is the right choice, a partner you can trust.
